

Minor edits:

Lines 152-153: the citation “galbany2014age” is unclear. Is that how one of the variables in the model was named? It’s out of context.

Lines 153-155: awkward phrasing for describing error

Line 192: to test if higher-ranking **FE** males? are preferentially targeted by males?

Line 228: I appreciate longer focal time period of this analysis (30 min, over the previous 5 min)

Line 317: p-values are less intuitive when presented as negative exponents. Suggest $p < 0.001$

Line 355: asymmetry is high, AS in mandrills (rather than LIKE in mandrills)

References 46 and 59 seems to be missing Journal information.
