**Objet:** Response to recommender

Dear recommender,

Thank you for your recommendations which have all been implemented. We have responded to your minor comment in this last version. We have deleted the sentence “The reduction of all available data to presence-only leads to loss useful information from the original data and the combined use of different data type and quality could improve SDM (Isaac et al., 2019; Robinson et al., 2020)” because it leads to confusion. In fact, we did not reduce all the available data and this sentence refers to more general data reduction in the context of Atlas projects.

We hope that this final version is now suitable for recommendation and thank you once more for your assistance.

Yours faithfully,

Florence Matutini
